

MEDIA RELEASE

Schwarzenburg (Switzerland), 1st June 2012

The company Ernst Schweizer AG has received an award for its wood/metal ST Drive sliding door unit – Gilgen Door Systems presents itself as the ideal cooperation partner.

With the *fensterbau/frontale 2012* building-industry trade fair of window/frontage products in Nuremberg (Germany) as the venue, a highly-prestigious jury of experts, consisting of six renowned architects, awarded the “Innovation Prize for Architecture, Windows, Doors and Facades”, in the category “Products of High Architectural Quality”, to the new, automated, wooden/metal ST Drive sliding-door unit supplied by Ernst Schweizer AG.

We congratulate the company Ernst Schweizer AG on its success, and are confident that this product will triumph on the market. In its role of cooperation partner, Gilgen Door Systems is proud of its participation in this project, and looks forward to performing the following tasks: installation, initial startup, training and system maintenance.

The competition, organised for the fourth time by the architecture trade journals *xia Intelligente Architektur* and *AIT* in collaboration with the company that manages the trade fair, Nürnberg Messe GmbH, is aimed at designers and manufacturers of innovative products destined to form part of the shells of buildings. The idea behind the architecture and design competition is to evaluate the wide range of products on the market, and award prizes to those that best meet the needs of architects.

The ST Drive sliding door unit, which operates with the Gilgen SLX drive system, is part of the HME-3 wood/metal system supplied by Ernst Schweizer AG, which can be used to construct entire building frontages. This includes floor-to-ceiling fixed glazing. The HME-3 system can be fitted to floors, ceilings or walls, and freely combined with corner elements.
